My technology

Hello, my name is Rikako Tabayashi, and an Assistant to the President. My job is to give the President advice about technologies to use to get his messages to the people in America.

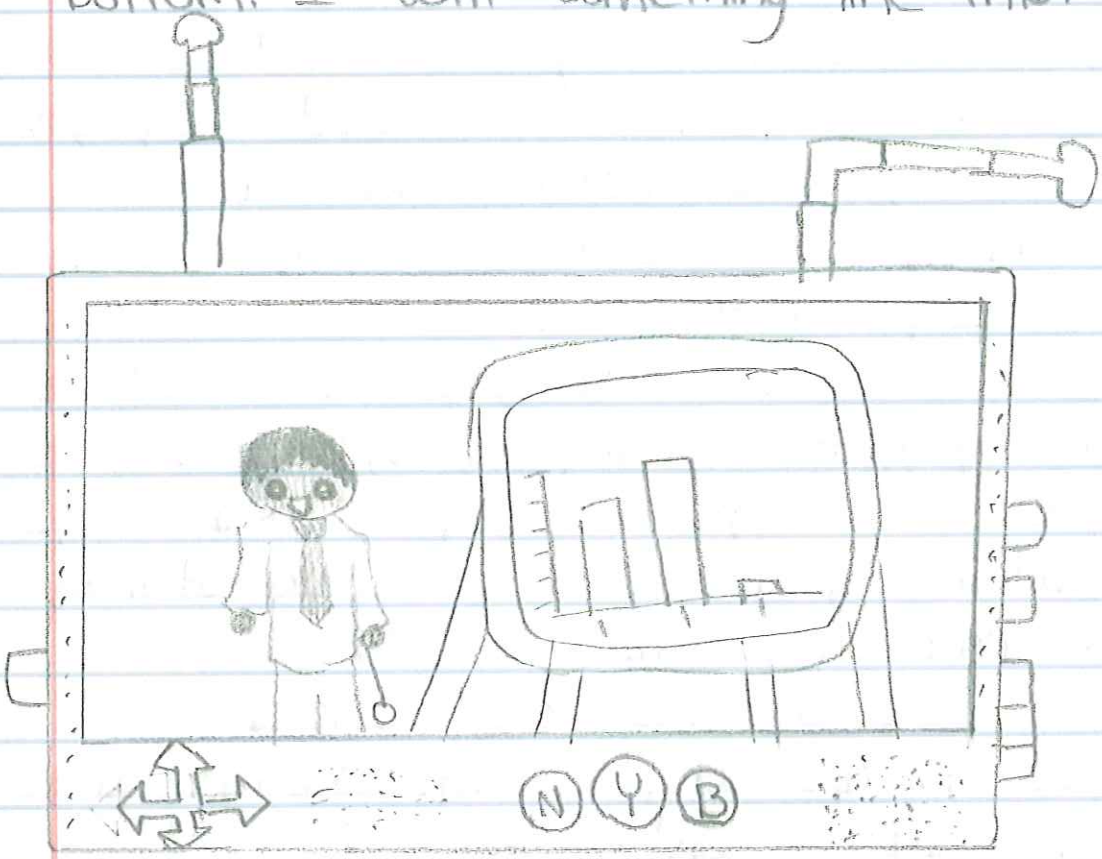
The technologies are e-mail, text messaging, internet homepages, TV, telephones, and faxes. Technology is very popular in the U.S., and most people can recieve information by at least one of these of methods.

The most common technologies are TV and telephone. The next most popular are computer and e-mail.

As the President's technology advisor, I believe the best to get a message to the people is the PET IDOL. This is a device I invented for all Americans. PET IDOL stands for People's Electoronic Technological Information and Data On Line.

PET IDOL looks like a tiny netbook computer screen, about 5 inches by 3 inches. It has two antennas on top to receive information like a radio. There are some control buttons on the

bottom. I will something like this.



It will be available in many colors, and the owner can choose the color. It runs on long lasting batteries. Because the PET IDOL is very simple, it will be low cost.

Every citizen in the U.S. will be given one for free. When the President has an important message, he will send it from his computer to everyone's PET IDOL. When the message comes to the PET IDOL it will loudly play the National Anthem. People will then read the President's message. Then they can

printed on paper, or save it on the PET IDOL. If no one is home to get the PET IDOL message, the PET IDOL will automatically save the message.

This is my idea for keeping the President in touch with all Americans.
