

My Tech Time Capsule

By Blade Cope
CHES
Ms. Brown's 5th grade

My tech time capsule will be bright red and as big as a laundry basket. It will be made of rubber, so it doesn't dent and it can withstand weather. It will be shaped like a dome and sealed tight with rubber cement. I will put a big sticker of the American flag on it, so future people will know where I'm from.

The first thing I will send to the future is a Nintendo DS. I will send the charger, in case the battery didn't keep its charge. I will send "Mario" and "Guitar Hero DS", so future people can see what games we played for fun.

The next thing I will send to the future is an IPOD Nano with earbuds. I will make sure it is fully charged. I will be full of today's best music, so future people can hear what music is popular today.

The next thing I will send to the future is an antenna T.V. Soon, we won't be able to use them ourselves and in the future they can see something that, by then, will be ancient.

The next thing I will send in my capsule is a laptop with an electrical cord. The battery never stays charged. I hope they have electrical plug-ins in the future. The future people can see what it was like to use Microsoft Windows and the Internet.

The next thing I would send is a keychain LED/laser light. The future

people can see how cool it is and how much fun it is to make your pet chase the laser around the room. The LED light also comes in very handy to light the way or to find a keyhole in the dark.

The last thing I will send in my tech time capsule will be a remote control car. It will be a big, red, Dodge Charger. It will be powerful and go very fast. The future people can see how fun it is to make jumps and jump the car. It is fun to see how fast you can go without wrecking.

I will include one last thing. I will put a note that tells them what everything is and how I use it. I will tell them a little about myself and tell them these are some of my favorite things to use. I will ask them to think of me when they use them and to remember how "Cool" we were in 2009.
