MY TECH TIME CAPSULE

If I was going to make a technology time capsule to let people in the future know about our technology today, I would start by putting a Nintendo Wii. A Wii is an active video game. For example, on the game Wii Sports you are actually playing baseball, tennis, or bowling. This is great because you are moving and getting exercise. Another video game I would put is a Playstation 3. It has superb graphics and is very fun to play. I would have to include an Ipod or another MP3 player. These are great if you like music. You can download your favorite songs on them and take them anywhere. Some you can even put movies and pictures. Next I would put a cell phone. Almost everyone has a cell phone. It comes in handy because you can talk, text, or even get on the internet. You can also take pictures and videos with them. I would put a computer in my time capsule. Computers are probably the most important things we use today. At school we take tests and find information on the internet. You can find out anything on the internet. Computers are very important at work. Businesses use e-mail to communicate with employees and customers. Almost everyone has computers at

Wii

home. You can play games on computers too. I would include a laptop because they are portable. Some of these items are for fun, but most are very useful. When someone in the future opens my tech time capsule they would probably laugh because technology will probably be ten times better than today.
