

It was May 27, 2009 and our little town had decided to do a technology time capsule. Inside we would put in the latest and greatest technology of our time. We didn't want to put in too much, so it isn't that big. We say around 10 technology items can be put inside so it will be the perfect size. We had planned to bury it in a small hill near a beautiful creek. We thought it would be good to wait 60 years before digging it up and look at what is inside. Everyone in our town was so excited because this was our 1st time capsule ever and even better, a technology one!

Everyone had so many great ideas to put inside capsule, but we still had to keep it limited to 10. After our final decision this is what we thought would be the best to put inside, an iPhone, a Macbook laptop, PSP, camera, remote control car, florescent lightbulb, alarm clock, hair straightener, coffee machine, and last but not least an Ipod video Nano. We thought putting some of that technology inside will help remind them how far or how much has changed since today.

After a long wait it was finally time! It took 2 men to pick up because all of it together made it pretty heavy. Everyone crowded around to get a good glimpse of history for our tiny town. Before the technology time capsule was buried the mayor Julia Mabite had written a letter to put in the capsule. It said, "May this technology time capsule help you realize how far you have gone from our time

and I hope you' ll enjoy your past. Thank you Julia Mabite .” After she put that in, the capsule was buried. A true moment of history for our tiny town.
