

My Technology Time Capsule

By Christian Rowland
Nolensville Elementary
Mrs. Palmer

Hello there! If you are reading this letter then you have found my tech time capsule, filled with important electronic goodies from my life in 2009 at that time I was only 11 years old. In my life back in my time I had a video game system called a Wii (pronounced wee) it connected to the TV set and I played games with a set of controllers that did not have wires, so I guess they were wireless they sort of look like TV remotes, each player needed a controller to play. The Wii was one of the best selling video game systems in the early 2000's even adults liked this Wii system. The Wii had all kinds of games like Wii Play. Wii Play had six different games in one. The Wii was fun, it was one of my all time favorites but let me move on to something else.

I also had a portable video game which was called in my time a Nintendo DS. DS stands for dual screen. The DS was a hand held video game that I could take to school, church pretty much anywhere. The DS had a game cartridge no bigger than your thumb. Nintendo DS could connect with other friends that had a DS, and the DS didn't need wires to connect and you would duel against other friends. We played lots of different games back in 2009.

Now I'm going to tell you about one of my personal belongings... the MP3 player or some people call this music player an IPOD. My MP3 player could hold as many as 500 songs. The MP3 is smaller than your palm and it has a set of headphones that go in each of your ears. I could purchase music that I like. Each song cost .99 to a \$1.99.

Now I'm going to tell you about something I wanted really bad in 2009 and so far I haven't got it while writing this. By the time I get to middle school I'll hopefully have one. I know you're dying to hear what I'm talking about. A telephone, but not just any telephone... a cellular phone. Or cell phone for short a cell phone is wireless and hand held. A cell phone is like a cordless house phone but the difference is that you can take it outside to school, the car and still make calls.

I can't imagine what computers are like in your day, but back in 2009 computers had been reduced to laptop sizes which fit on your lap it's a fully functioning computer some cell phones can work like a computer there is so much technology in the world but that's all I can share.
